

TE Curve Verification Pipeline Sparse Original ONNX Variant Report

Feedforward Transmission Error Baseline

Styled PDF edition generated from the canonical Markdown analysis report for improved readability, section hierarchy, and table presentation.

Overview

This report evaluates two sparse forward `TE Curve Verification Pipeline` candidates built only from the recovered paper-original `ONNX` release under `reference/rcim_ml_compensation_recovered_assets/models/exact_onnx_paper_release`. Both variants reconstruct TE curves from harmonics `0`, `1`, `39`, and `40` only.
